This adaptive management system employs science-based applied evaluation tools to give each farmer baseline data, in the first year, then performance data in subsequent years giving them real feedback from their own operation on which to make management decisions regarding nutrients, soil, pests, energy uses and sources, wildlife habitat, greenhouse gas emissions (GHGE) and other atmospheric resources he or she may prioritize. ISA staff train and oversee contracted Certified Crop Advisors who provide technical assistance to producers in developing and maintaining their CEMSA plan. Cost and profit data is also plugged into the plan to guide the producer in determining the economic sustainability of environmental performance.

The public now demands from crop producers both increased production of food, fiber, fuel, and other biobased product feedstocks and increased, documented environmental performance to conserve soils, sequester carbon, improve water quality, reduce greenhouse gas emissions, improve energy efficiency and increase wildlife habitat. As independent business persons, farmers in the Upper Mississippi River (UMR) Basin and across the country need management systems to help them incorporate the best tools of science and business to measure and improve
